Access Chambers

Manufactured from high density polyethylene (HDPE), these access boxes are very resistant to impact and chemicals. The chambers are rotationally moulded on cast aluminium tooling which makes them easy to stack and install. There is a wide internal flange within the chamber, allowing the frame to fit straight onto the box; this transfers direct loading evenly.

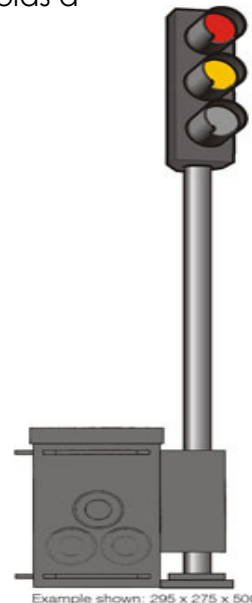

Trepanned holes take all electricity and utility size duct and the product is approved by many Local Authorities and Utility Sectors. Suitable for most ducting applications (3 boxes per metre depth), both square and rectangular chambers are available from 300mm to 600mm.

Pole Boxes provide easy access and protect cables. Moulded in HDPE the box is one piece; with a pole clamp which securely holds a 115mm pole. Box depth is 500mm. 2 sizes, square; 275mm or 450mm. Suitable for 63mm to 120mm cut outs.

Also available.....

STAKKAbOX™ is a load-bearing chamber designed to exceed 12.5 tonne wheel loading, without the need for a concrete surround (EN124-B125). The unit can be completely dismantled on site and any section of the STAKKAbOX™ can be taken out. All STAKKAbOX™ sections fall below the recognised one man weight lifting limit. Square and rectangular boxes available from 300mm to 1200mm. We also supply STAKKAbOX™ pole boxes.

Example shown: 295 x 275 x 500mm
