## **Geosynthetics**

A range of specialist products to use for Drainage, Erosion Control, Soil Stabilisation, Gas Dispersion, Environmental Protection or Contamination Indication. There are so many different applications, Cirrus would be happy to discuss your requirements.

Geotextile fabrics can be woven or unwoven, permeable or impermeable.

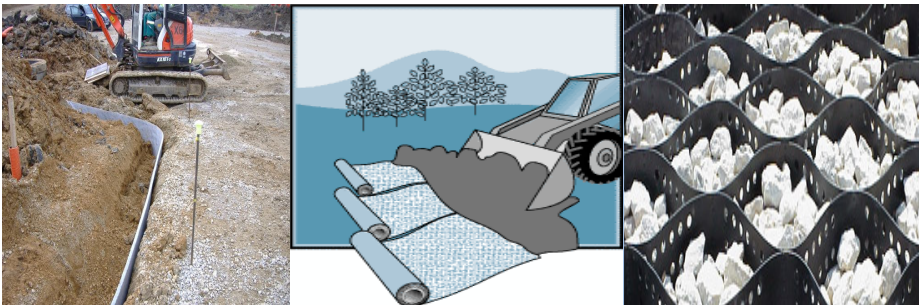

Permeable geotextiles are usually manufactured from polypropylene fibres. They are resistant to acids, alkalis, chlorides, sulphates and other common chemicals found in soils.

Impermeable membranes are manufactured from HDPE, LDPE, Polypropylene, Butyl. These are used in the containment and management of solids, liquids and gases.

Geosynthetics Clay liner (GCL) for ponds, lakes or landfill, is self sealing, fast and easy to install.

There is a wide range of pre-fabricated void formers, which are light and easy to handle. These geocomposite drainage systems, provide practical solutions for groundwater and gas.

Grass Protection Mesh, which protects grassed areas used by pedestrians or vehicles, is available in four different grades.

CellWeb™ is a 3-dimensional cellular confinement system made from HDPE. It creates a strong, light-weight, expandable panel which forms a durable composite mattress. This can be filled with common materials, for demanding load support and control applications.

Geotextiles are supplied, usually on a roll, in various widths from 1m to 5m. Lapping tape and all other required accessories are stocked by Cirrus.
