Twin wall Surface Drainage

Twinwall drain is a gravity surface and storm water system, which is robust but light and easy to use. It is made using a twin extrusion process and then by heat welding the two layers together. This product is black with a corrugated outer and a smooth inner wall.

Twinwall drain is ideal for the collection of surface and sub-surface water. It is a direct alternative to all non-pressurised, gravity drainage systems. The smooth inner surface is designed for carrying water away rapidly.

Twinwall Drainage is light and flexible; easy to install and resistant to possible on-site damage.

Twinwall drainage pipe can be supplied Solid, Perforated or Half-Perforated:- Perforated pipe usually has 4 slots, equally spaced around its circumference to create permeability.

Half-perforated pipe also has slots around it, although these are sited in one half of the circumference. The number of slots will vary with pipe diameter, to reduce the permeable area proportionally.

Twinwall diameters ready for despatch

Nominal I/D (mm)	100	150	225	300	375	450	500	600
------------------	-----	-----	-----	-----	-----	-----	-----	-----

CIRRUS can also supply unperforated lengths from 750 to 1500mm Dia.

The BBA have awarded Twinwall drainage, certificates under the Highway Authorities' Product Approval Scheme (HAPAS). We advise however that where Local Authority adoption is possible, their specific requirements are checked prior to ordering.

All fittings available including....

~Bends, ~Couplings, ~Reducers, ~Ring Seals ~Junctions.

Ask us about Catchpits, we supply all sizes.
