

# Class 1 Electrical Ducting

**Class 1 ducting** is designed to meet the specifications of **ENATS 12-24 CLASS 1** and is for the ducting of high voltage cables. There are 2 different types available and therefore approval should be sought from the Distribution Network Operator (DNO) before installation. Specific colour requirements also vary depending on the DNO concerned.

**Polypropylene Twinwall** is supplied with a black outer and red liner as standard, red outer with red liner is also available. Standard sizes are I/Ds of 100mm, 125mm and 150mm, and lengths are generally 6m.

**Single Wall PVC** is also supplied in either black or red and comes with a blown socket as standard. Ring sealed and plain ended options can also be used. The sizes range from 89mm to 225mm in both colours and are 6m long as standard.

**Bends and couplers** are kept in stock for both types of ducting.
