

Covers & Frames

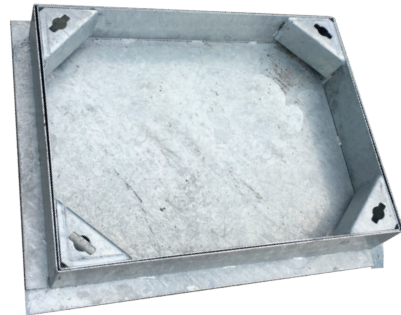

An extensive range of durable **access covers** and frames, meeting the needs of the civil engineering, utility and infrastructure sectors are available.

Composite, non-slip, access covers for ducted chamber systems. Suitable for installation in pedestrian and low traffic areas.

Galvanised covers are available in hinged or drop in formats and can include provision for spring or gas assistance in order to comply with manual handling regulations.

Covers can also feature security protection options and can be supplied with or without seals. They are available in a range of standard sizes with single, double, triple and multiple variants. Special sizes are manufactured to order.

Ductile and cast iron covers have lift out, slide out or hinged access options, depending on the clear opening size. All covers can be supplied badged to suit your specific requirements.

These covers are available to satisfy loading specifications **B125-D400** in accordance with **BS EN 124**.
