

Modular Cells

Interlocking Modular Cells, create strong, flexible, water attenuation or soakaway systems of any size, shape and depth to suit every ground and climatic condition.

They provide a 95% void space for capturing surface water run-off from roof gutters and surface drains.

Cells to suit light, medium and heavy load criteria are available from stock.

Hybrid solutions can be created to meet different conditions on a single site.

Structures can be wrapped in an **impermeable** membrane, for storage and controlled release, or a **permeable Geotextile**, for filtration and/or soakaway purposes.

Access for **inspection and maintenance** can be provided as necessary.
