

Structural Access Systems

For heavier loading requirements (up to E600 - 60 tonne classification in accordance with BS EN 124), These access systems are ranges of sectional, modular and structural pre-formed access chambers.

The systems are used across many different markets and are approved by most **Local Authorities and Utility Companies**.

Access chambers are always referred to by their "clear opening" dimensions (internal) and some standard sizes are shown in the table.

Clear Opening	
Length (mm)	Width (mm)
300	300
450	300
450	450
600	450
600	600
750	600
750	750
900	450
900	600
900	900
1200	1200

Each chamber is made from 150mm deep riser and access sections, which interlock to offer flexibility in finished chamber depth. Each section is profiled to positively interlock with the units above and below. Each access section has various entry/exit points depending on their size.

- Quick to install
- Cost effective
- Easy to handle
- Strong
- Recyclable
- Long life
- Extensive ranges
